

A RESOUNDING YES FOR THE DRIBBLE BAR SYSTEM

The dribble bar systems from
Vogelsang are the ideal solution for
efficient liquid manure spreading

PAVING THE WAY FOR THE FUTURE WITH THE DRIBBLE BAR

The right technique for nutrient-efficient liquid manure spreading

For the dribble bar system to be effective, it needs to be used properly.

If the linkage is only a few centimeters above the ground, this is wrong. Vogelsang uses particularly rigid hose ends which, when used properly as shown in the illustration on the right, separate the crops and spread the liquid manure directly under the soil.

MAXIMUM SPREADING ACCURACY

Optimal use of nutrients thanks to precise application under the crops

Accurate precision distributors

Maximum reliability, precise distribution of nutrients and optimal shredding of foreign and fibrous matter for minimized downtime

Clever hose routing

Discharge hoses of approximately the same lengths to prevent the "V shape" that can form at the start

Special hose

Robustness, elasticity, and UV resistance thanks to unique production process

TeleShift

Allows the boom ends to extend or retract for transport purposes or in order to reduce the working width

The ultra-rigid dribble bar ends also make for precise spreading. The deposited liquid manure seeps right into the soil, and the crops form a cover over it, protecting the natural fertilizer from the wind and sun and preventing the nutrients from escaping as much as possible.

Correct application of a dribble bar linkage:
as close to the soil as possible!

Rigid end hoses

Even spraying distance, no overlapping of hoses as well as precise spreading of liquid manure under the crops for minimized crop contamination

Sturdy, fully galvanized frame designs

Durability coupled with low overall weight

Compact, versatile and easy to install:
the SwingUp

MORE FLEXIBLE LIQUID MANURE MANAGEMENT – IT'S AS SIMPLE AS THAT

Effective and precise spreading technology from Vogelsang

Vogelsang's dribble bar systems stand for nutrient-efficient and highly accurate spreading close to the soil. This is made possible by robust frame designs, flexible management of part-width sections, an optimal hose layout, innovative special solutions and accurate precision distributors with a variation coefficient of less than five percent. The dribble bar systems with working widths of up to 36 meters are designed for ultimate flexibility and a high level of effectiveness.

Comfort Flow Control (CFC)

Allows individually defined hose groups to be switched off using air pressure. This is controlled from the driver's cab.

High effectiveness

Optimum working width for minimal costs, time savings and less travel

Accurate precision distributors

Maximum reliability, precise distribution of nutrients and optimal shredding of foreign and fibrous matter for minimized downtime

Clever hose routing

Discharge hoses of approximately the same lengths to prevent the "V shape" that can form at the start

**Sturdy, fully galvanized
frame designs**

Durability coupled with
low overall weight

Compact transport widths

Minimal transport widths with
optimal working widths of up
to 36 meters

Rigid end hoses

Even spraying distance, no overlapping of hoses as well as
precise spreading of liquid manure under the crops for mini-
mized crop contamination

MAXIMUM SPREADING ACCURACY

Optimal use of nutrients thanks to precise
application under the crops

What our customers say

“Our customers on the island of Rügen have strict demands for spreading technology and require a working width of 36 meters. The SwingMax linkage allows me to meet these requirements easily. The device is excellently finished, durable and versatile in use. Maintenance work is rarely required, and completed quickly by Vogelsang’s service team, so extended downtime is never a problem.”

Anton Reetz, Agrarservice Rügen, Garz

“In addition to the flexibly adjustable working widths, we particularly appreciate the very good price-performance ratio of Vogelsang’s dribble bar systems. The maintenance costs and wear are relatively low, but the output is very high due to the enormous area output. Compared to wide spreading, we also record lower nitrogen losses and thus lower spreading costs. This also benefits our customers.”

Henning Kruse, Kruse Friedewalde GmbH, Petershagen

Flexible, powerful and effective: the SwingMax

“With the SwingUp system including part-width section cut-off, we are able to meet the exacting demands of our customers with a great level of ease. Whatever the crops and weather, the spreading is perfect with minimum odor. This is a fact for which both the farmers and their neighbors are thankful.”

Christof Schürmann, agricultural contractor, Börger

Overview of Vogelsang dribble bar technology

| Type | SwingUp | SwingMax | Compax | BackPac |
|---------------|-------------|------------|-------------------------|-------------------------------|
| Suitable for | Tankers | Tankers | Self-propelled vehicles | Umbilical application systems |
| Working width | 7,5 to 18 m | 18 to 36 m | 12 to 18 m | 12 to 30 m |
